PROFESSIONAL SUMMARY

Results-driven Frontend Software Developer with 2.8+ years of experience building scalable, high-performance web applications using Angular (v11–v19), TypeScript, HTML5, and CSS3. Proven track record delivering modular UI architectures, real-time map-based logistics platforms, and RESTful API integrations in enterprise Agile environments.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Java, SQL
Frontend: Angular 11–19, HTML5, CSS3, RxJS, PrimeNG, Bootstrap, MapBox, Canvas API
Backend & APIs: Spring Boot, RESTful APIs, Postman
Tools & DevOps: Git, GitHub, Docker, SonarQube, MS Office
Methodologies: Agile (Scrum), Component-Driven Development, Code Reviews

PROFESSIONAL EXPERIENCE

Software Developer | **Cozentus Technologies** | Bhubaneswar, India Jul 2023 – Present

- Designed and developed scalable Angular (v11–v19) applications with lazy loading, reusable components, and strict TypeScript, improving UI performance and long-term maintainability across enterprise logistics platforms.
- Spearheaded Angular migration from v11 → v16 → v19, ensuring backward compatibility, performance gains, and adherence to latest framework standards.
- Led UI codebase unification initiative, consolidating shared component libraries to reduce code duplication and accelerate cross-team development velocity.
- Integrated RESTful APIs built with Spring Boot; validated all endpoints using Postman, reducing integration issues in QA cycles.
- Developed real-time shipment tracking features with MapBox visualizations, interactive alerts, and predictive ETA refresh logic (every 10 minutes).
- Collaborated with backend, QA, product, and business stakeholders in an Agile environment to deliver production-ready logistics solutions on schedule.

PROJECTS

Smart Navigator *Angular | TypeScript | Java | Spring Boot | MapBox | Docker | SQL*
https://navigator.bdpsmart.com

- Built an end-to-end digital logistics platform providing real-time global shipment visibility for international freight tracking.
- Implemented interactive map-based tracking with MapBox and predictive ETA engine refreshing every 10 minutes.
- Developed alerting mechanisms for shipment delays, port congestion, and route exceptions, improving operational responsiveness for supply chain teams.
- Delivered analytics dashboards surfacing routing, scheduling, and shipment performance insights to reduce inventory risk.

Detention & Demurrage (D&D) Management Platform *Angular | Java | Spring Boot | MapBox | Canvas | Docker | SQL*
https://dndtest.bdpsmart.com/#/app/home

- Contributed to PSA BDP's Smart Suite — a proprietary enterprise logistics platform for monitoring global container detention and demurrage charges.
- Built real-time shipment status monitoring, fee forecasting, and risk assessment modules to minimize unnecessary D&D charges for global shippers.
- Enabled proactive container movement management through dynamic reporting, reducing financial exposure for freight forwarders.

CERTIFICATIONS

Foundations of Coding – Full Stack Developer — Microsoft (2025)
Introduction to Front-End Development — Meta (2025)

EDUCATION

B.Tech in Computer Science Engineering 2019 – 2023
Parala Maharaj Engineering College, Berhampur, India | **CGPA: 9.1 / 10.0**
